

Disappearing Nutrition Risk Codes

In the recent release and 2.16.06, when the CPA assigns a new nutrition risk code to a participant after the certification visit, the system-assigned nutrition risk code(s) disappear.

The CPA will need to do a work around to have the system-assigned nutrition risk code(s) reappear. Here is what the CPA will need to do:

1. Go to the participant's Demographic screen, AdditionalInfo1 tab.
2. Change the Household Smoking to the opposite of what is in the box.
3. Exit the Demographic screen by going to a different screen. If asked, save the Demographic screen.
4. Return to the Demographic screen, AdditionalInfo1 tab.
5. Change the Household Smoking back to the original value.
6. Exit the Demographic screen by going to a different screen. If asked, save the Demographic screen.
7. Check the participant's nutrition risk codes for the return of the system-assigned codes.
8. If they did not reappear, call the Help Desk.

Changing the Household Smoking value back and forth will cause SPIRIT to reevaluate nutrition risk, including system assigned nutrition risks.

If you have any questions, please call the Help Desk.
